

Aron Alpha Series of Instant Glues for Consumers: Toagosei Announces the Release of Our New Aron Alpha Hikari Product

Toagosei Co., Ltd. has released our new Aron Alpha Hikari product (manufacturer: Toagosei Co., Ltd. / Seller: Konishi Co., Ltd.) in the Aron Alpha series of instant glues for consumers. We will be selling it in more and more stores going forward.

Aron Alpha Hikari retains the conventional functions of instant glue with strong and instantaneous adhesion while enabling the further shortening of curing times by allowing the user to expose the points where the product has been applied with the attached light.

Features of Aron Alpha Hikari

- **Enables use of Aron Alpha in new ways**
Aron Alpha Hikari realizes instantaneous curing even in settings for which it is difficult to use conventional Aron Alpha by irradiation by allowing the user to expose the points where the product has been applied with the attached light. This includes, for example, adhesion of parts with a small adhesion area and coating applications.
- **Beautiful finish**
Irradiation with the attached light prevents blushing (the phenomenon in which the area around where the adhesive has been applied becomes whiter) which is found on rare occasions after the use of an instant glue to provide a finish with a beautiful appearance.
- **Conventional functions of Aron Alpha remain the same**
It is possible to use Aron Alpha Hikari in the same way as conventional Aron Alpha without exposing the points where the product has been applied with the attached light.

Eye-friendly blue light*1

Recommended for models and handmade creations made with small parts.

Can be used to coat cables.

*1: When compared with UV light.

Specifications and Other

Product name: Aron Alpha Hikari

Volume: 4 g

Price: Discretionary price
