

Toagosei Announces the Launch of Our New Dental Hemostatic Agent Called “Aron cure Dental”

Toagosei Co., Ltd. hereby announces that we will launch a dental hemostatic agent for tooth extraction sockets called “Aron cure Dental” on September 1.

Aron cure Dental is a new concept dental hemostatic agent. It stops bleeding after tooth extraction with a hydrogel polymer sponge.

1. Product Overview

Brand name:	Aron cure Dental
Generic name:	Secondary Healing Hydrogel Wound Dressing and Protective Agent
Manufacturer:	Toagosei Co., Ltd.
Seller:	DENTALEAD CORPORATION
Class:	Class III
Medical device approval number:	30600BZX00071000

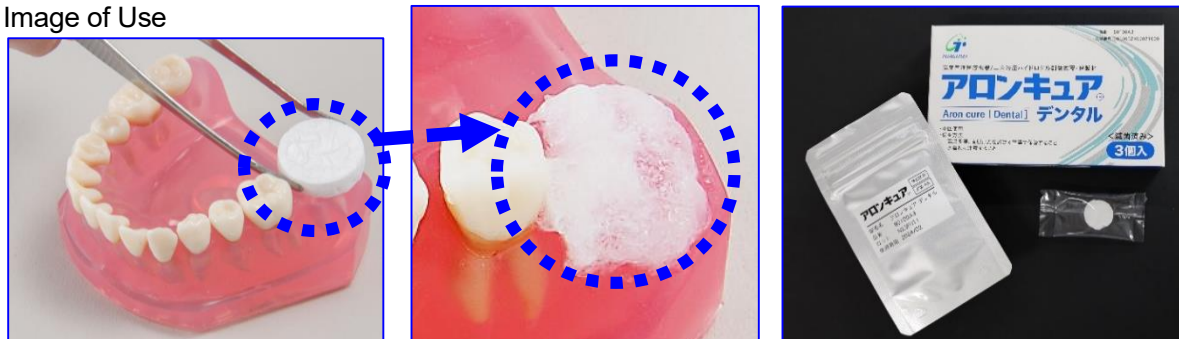

2. Features of Aron cure Dental

No compression or removal treatment is required. This shortens the hemostasis treatment time compared to conventional gauze hemostasis. That contributes to reducing the burden on medical professionals.

In addition, it is possible to expect the beautiful repair of gums because blood clots are retained due to the high level of adhesion with the body.

After use, the product dissolves in saliva. It is ultimately excreted outside the body via the alimentary canal.

Image of Use

*Aron cure Dental uses Wispecs® (<https://www.wispecs.com/>) technology.

We will focus on the medical care field and work to solve the issues of medical professionals by continuing to create new products in the future.
